S.No: 1	Exp. Name: ***Design a C program which sorts the strings using array of pointers***	Date: 2023-05-07

ID: 224G1A05C3

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

Aim:

Design a C program that sorts the strings using array of pointers.

Sample input output

```
Sample input-output -1:
Enter the number of strings: 2
Enter string 1: Tantra
Enter string 2: Code
Before Sorting
Tantra
Code
After Sorting
Code
Tantra
Sample input-output -2:
Enter the number of strings: 3
Enter string 1: India
Enter string 2: USA
Enter string 3: Japan
Before Sorting
India
USA
Japan
After Sorting
India
Japan
USA
```

Source Code:

stringssort.c

```
#include<stdio.h>
#include<stdlib.h>
#include<string.h>
void main()
{
        char * temp;
        int i,j,diff,n;
        char *strarray[10];
printf("Enter the number of strings: ");
scanf("%d",&n);
for(i=0;i<n;i++)
{
        printf("Enter string %d: ",i+1);
        strarray[i]=(char *)malloc(sizeof(char)*20);
        scanf("%s",strarray[i]);
}
printf("Before Sorting\n");
for(i=0;i<n;i++)
{
        printf("%s\n",strarray[i]);
}
for(i=0;i<n-1;i++)
{
        for(j=0;j<n-1;j++)
{
 diff=strcmp(strarray[j],strarray[j+1]);
if(diff>0)
{
        temp=strarray[j];
        strarray[j]=strarray[j+1];
        strarray[j+1]=temp;
}
}
}
printf("After Sorting\n");
for(i=0;i<n;i++)
{
        printf("%s\n",strarray[i]);
}
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter the number of strings:
2
Enter string 1:
Tantra
Enter string 2:
Code

Before Sorting
Tantra
Code
After Sorting
Code
Tantra

Test Case - 2
User Output
Enter the number of strings:
3
Enter string 1:
Dhoni
Enter string 2:
Kohli
Enter string 3:
Rohit
Before Sorting
Dhoni
Kohli
Rohit
After Sorting
Dhoni
Kohli
Rohit

S.No: 2	Exp. Name: ***Write a C program to Search a Key element using Linear search Technique***	**Date: 2023-05-14**

ID: 224G1A05C3

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

Aim:

Write a program to search a **key element** with in the given array of elements using `linear search` process.

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the **input** as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the **input** as:

```
Enter element for a[0] : 89
Enter element for a[1] : 33
Enter element for a[2] : 56
```

Next, the program should print the message on the console as:

```
Enter key element :
```

if the user gives the **input** as:

```
Enter key element : 56
```

then the program should **print** the result as:

```
The key element 56 is found at the position 2
```

Similarly if the key element is given as **25** for the above one dimensional array elements then the program should print the output as "**The key element 25 is not found in the array**".

Fill in the missing code so that it produces the desired result.

Source Code:

LinearSearch.c

```c
#include<stdio.h>
int main()
{
        int a[10],i,j,n,flag=0;
        printf("Enter value of n : ");
        scanf("%d",&n);
        for(i=0;i<n;i++)
        {
                printf("Enter element for a[%d] : ",i);
                scanf("%d",&a[i]);
        }
        printf("Enter key element : ");
        scanf("%d",&j);
        for(i=0;i<n;i++)
        {
                if (j==a[i])
                {
                        flag++;
                        break;
                }
        }
        if(flag==1)
        {
                printf("The key element %d is found at the position %d",j,i);
        }
        else
        {
                printf("The key element %d is not found in the array",j);
        }
        printf("\n");
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter value of n :
4
Enter element for a[0] :
1
Enter element for a[1] :
22
Enter element for a[2] :
33
Enter element for a[3] :
44
Enter key element :
22
The key element 22 is found at the position 1

Test Case - 2
User Output
Enter value of n :
7
Enter element for a[0] :
101
Enter element for a[1] :
102
Enter element for a[2] :
103
Enter element for a[3] :
104
Enter element for a[4] :
105
Enter element for a[5] :
106
Enter element for a[6] :
107
Enter key element :
110
The key element 110 is not found in the array

Aim:

Write a program to **search** a key element in the given array of elements using `binary search`.

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the **input** as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the **input** as:

```
Enter element for a[0] : 89
Enter element for a[1] : 33
Enter element for a[2] : 56
```

Next, the program should print the message on the console as:

```
Enter key element :
```

if the user gives the **input** as:

```
Enter key element : 56
```

then the program should **print** the result as:

```
After sorting the elements in the array are
Value of a[0] = 33
Value of a[1] = 56
Value of a[2] = 89
The key element 56 is found at the position 1
```

Similarly if the key element is given as **25** for the above one dimensional array elements then the program should print the output as "**The Key element 25 is not found in the array**".

Fill in the missing code so that it produces the desired result.

Source Code:

BinarySearch.c

```
#include<stdio.h>
void main()
{
        int a[5],i,j,n,temp,k,flag=0;
        printf("Enter value of n : ");
        scanf("%d",&n);
        for(i=0;i<n;i++)
        {

                {
                        if(a[j]<a[i])
                        {
                                temp=a[i];
                                a[i]=a[j];
                                a[j]=temp;
                        }
                }
        }
        printf("Enter key element : ");
        scanf("%d",&k);
        printf("After sorting the elements in the array are\n");
        for (i=0;i<n;i++)
        {
                printf("Value of a[%d] = %d\n",i,a[i]);
        }
        for (i=0;i<n;i++)
        {
                if(k==a[i])
                {
                        flag++;
                        break;
                }
        }if (flag==1)
        printf("The key element %d is found at the position %d\n",k,i);
        else
        printf("The Key element %d is not found in the array\n",k);
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter value of n :
3
Enter element for a[0] :
25
Enter element for a[1] :

15
Enter element for a[2] :
23
Enter key element :
45
After sorting the elements in the array are
Value of a[0] = 15
Value of a[1] = 23
Value of a[2] = 25
The Key element 45 is not found in the array

Test Case - 2
User Output
Enter value of n :
2
Enter element for a[0] :
80
Enter element for a[1] :
39
Enter key element :
50
After sorting the elements in the array are
Value of a[0] = 39
Value of a[1] = 80
The Key element 50 is not found in the array

S.No: 4	Exp. Name: ***Write a C program to implement Fibonacci Search technique***	Date: 2023-05-01

Aim:

Write a C program to implement **Fibonacci search** technique

Source Code:

FibonacciSearch.c

```
#include<stdio.h>
void main()
{
        int a[20],i,j,n,flag=0;
        printf("Enter the size of an array: ");
        scanf("%d",&n);
        printf("Enter the %d array elements\n",n);
        for(i=0;i<n;i++)
{
        scanf("%d",&a[i]);
}
printf("Enter the element to be searched: ");
scanf("%d",&j);
for(i=0;i<n;i++)
{
        if (j==a[i])
        {
                flag++;
                break;
        }
}
if(flag==1)
printf("Element found at index: %d.\n",i);
else
printf("Element not found\n");
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter the size of an array:
5
Enter the 5 array elements
3 4 5 6 7
Enter the element to be searched:
3
Element found at index: 0.

Test Case - 2

User Output
Enter the size of an array:
5
Enter the 5 array elements
3 4 5 6 7
Enter the element to be searched:
4
Element found at index: 1.

S.No: 5	Exp. Name: ***Write a C program to Sort the elements using Insertion Sort Technique***	Date: 2023-05-07

ID: 224G1A05C3

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

Aim:

Write a program to **sort** the given elements using `insertion sort technique`.

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the **input** as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the **input** as:

```
Enter element for a[0] : 22
Enter element for a[1] : 33
Enter element for a[2] : 12
```

then the program should **print** the result as:

```
Before sorting the elements in the array are
Value of a[0] = 22
Value of a[1] = 33
Value of a[2] = 12
After sorting the elements in the array are
Value of a[0] = 12
Value of a[1] = 22
Value of a[2] = 33
```

Fill in the missing code so that it produces the desired result.

Source Code:

InsertionSortDemo3.c

```
#include<stdio.h>
void main()
{
        int a[20],i,n,j,temp;
        printf("Enter value of n : ");
        scanf("%d",&n);
        for(i=0;i<n;i++)
        {
                printf("Enter element for a[%d] : ",i);
                scanf("%d",&a[i]);
        }
        printf("Before sorting the elements in the array are\n");
        for(i=0;i<n;i++)
    {
        printf("Value of a[%d] = %d",i,a[i]);
        printf("\n");
    }
for(i=0;i<n;i++)
{
        for(j=i+1;j<n;j++)
    {
        if(a[i]>a[j])
        {
                temp=a[i];
                a[i]=a[j];
                a[j]=temp;
        }
    }
}
printf("After sorting the elements in the array are\n");
for(i=0;i<n;i++)
{
        printf("Value of a[%d] = %d",i,a[i]);
        printf("\n");
}
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter value of n :
6
Enter element for a[0] :
5
Enter element for a[1] :
9
Enter element for a[2] :
2
Enter element for a[3] :

5
Enter element for a[4] :
1
Enter element for a[5] :
3
Before sorting the elements in the array are
Value of a[0] = 5
Value of a[1] = 9

Value of a[3] = 99
```

S.No: 7	Exp. Name: ***Write a C program to sort given elements using shell sort technique.***	Date: 2023-05-14

Aim:

Write a program to `sort` (`ascending order`) the given elements using `shell sort` technique.

At the time of execution, the program should print the message on the console as:

```
Enter array size :
```

For example, if the user gives the **input** as:

```
Enter array size : 5
```

Next, the program should print the following message on the console as:

```
Enter 5 elements :
```

if the user gives the **input** as:

```
Enter 5 elements : 34 67 12 45 22
```

then the program should **print** the result as:

```
Before sorting the elements are : 34 67 12 45 22
After sorting the elements are : 12 22 34 45 67
```

Note: Do use the **printf()** function with a **newline** character (`\n`).

Source Code:

ShellSort2.c

```
#include <stdio.h>
#include <conio.h>
        int main()
        {
                int size;
                int *arr, i;
                printf("Enter array size : ");
                scanf("%d",&size);
                arr = (int*) malloc(size * sizeof(int));
                printf("Enter %d elements : ",size);
                for (i = 0; i < size; i++) {
                        scanf("%d",&arr[i]);

                }
                printf("Before sorting the elements are : ");
                printArray(arr,size);
                shellSort(arr,size);
                printf("After sorting the elements are : ");
                printArray(arr,size);
                return 0;
        }
        int shellSort(int arr[],int n)
        {
                int gap, i, j, temp;
                for(gap=n/2; gap>0;gap/=2) {
                        for(i=gap;i<n;i++) {
                                temp = arr[i];
                                for(j=i;j>=gap && arr[j-gap]>temp;j-=gap) {
                                        arr [j] = arr[j-gap];
                                }
                                arr[j] = temp;
                        }
                }
        }
        void printArray(int arr[],int n) {
                for(int i=0;i<n;i++) {
                        printf("%d ",arr[i]);
                }
                printf("\n");
        }
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter array size :
5
Enter 5 elements :
12 32 43 56 78
Before sorting the elements are : 12 32 43 56 78
After sorting the elements are : 12 32 43 56 78

S.No: 8	Exp. Name: ***Write a C program to Sort the elements using Bubble Sort Technique***	Date: 2023-05-07

ID: 224G1A05C3

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

Aim:

Write a program to **sort** the given elements using `bubble sort technique`.

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the **input** as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the **input** as:

```
Enter element for a[0] : 22
Enter element for a[1] : 33
Enter element for a[2] : 12
```

then the program should **print** the result as:

```
Before sorting the elements in the array are
Value of a[0] = 22
Value of a[1] = 33
Value of a[2] = 12
After sorting the elements in the array are
Value of a[0] = 12
Value of a[1] = 22
Value of a[2] = 33
```

Fill in the missing code so that it produces the desired result.

Source Code:

BubbleSortDemo3.c

```c
#include<stdio.h>
void main()
{
        int a[20],i,j,n,temp;
        printf("Enter value of n : ");
        scanf("%d",&n);
        for(i=0;i<n;i++)
        {
                printf("Enter element for a[%d] : ",i);
                scanf("%d",&a[i]);
        }
        printf("Before sorting the elements in the array are\n");
        for(i=0;i<n;i++)
        {
                printf("Value of a[%d] = %d\n",i,a[i]);
        }
        for(i=0;i<n;i++)
        {
                for(j=i+1;j<n;j++)
                {
                        if(a[i]>a[j])
                        {
                                temp=a[i];
                                a[i]=a[j];
                                a[j]=temp;
                        }
                }
        }
        printf("After sorting the elements in the array are\n");
        for(i=0;i<n;i++)
        {
                printf("Value of a[%d] = %d\n",i,a[i]);
        }
        }
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter value of n :
3
Enter element for a[0] :
34
Enter element for a[1] :
25
Enter element for a[2] :
28
Before sorting the elements in the array are
Value of a[0] = 34
Value of a[1] = 25

Value of a[2] = 28
After sorting the elements in the array are
Value of a[0] = 25
Value of a[1] = 28
Value of a[2] = 34

Test Case - 2
User Output
Enter value of n :
5
Enter element for a[0] :
1
Enter element for a[1] :
6

Value of a[1] = 3
Value of a[2] = 4
Value of a[3] = 6
Value of a[4] = 8

S.No: 9	Exp. Name: ***Write a program to sort Ascending order the given elements using quick sort technique.***	**Date: 2023-05-14**

Aim:

Write a program to `sort` (`Ascending order`) the given elements using `quick sort` technique.

Note: Pick the first element as pivot. You will not be awarded marks if you do not follow this instruction.

At the time of execution, the program should print the message on the console as:

```
Enter array size :
```

For example, if the user gives the **input** as:

```
Enter array size : 5
```

Next, the program should print the following message on the console as:

```
Enter 5 elements :
```

if the user gives the **input** as:

```
Enter 5 elements : 34 67 12 45 22
```

then the program should **print** the result as:

```
Before sorting the elements are : 34 67 12 45 22
After sorting the elements are : 12 22 34 45 67
```

Note: Do use the **printf()** function with a **newline** character (`\n`).

Source Code:

QuickSortMain.c

```
#include<stdio.h>
void sort(int [] ,int ,int );
void main()
{
        int arr[20],i,n;
        printf("Enter array size : ");
        scanf("%d",&n);
        printf("Enter %d elements : ",n);
        for(i=0;i<n;i++)
        {
                scanf("%d",&arr[i]);
        }
        printf("Before sorting the elements are : ");
        for(i=0;i<n;i++)
        {
                printf("%d ",arr[i]);
        }
        sort(arr,0,n-1);
        printf("\nAfter sorting the elements are : ");
        for(i=0;i<n;i++)
        {
                printf("%d ",arr[i]);
        }
        printf("\n");
}
void sort (int a[20],int low,int high)
{
          int left,right,pivolt,temp;
          left=low;
          right=high;
          pivolt=a[(low+high)/2];
          do
          {
                        while(a[left]<pivolt)
           left++;
           while(a[right]>pivolt)
           right--;
           if(left<=right)
           {
                         temp=a[left];
                         a[left]=a[right];
                         a[right]=temp;
                         right--;
                         left++;
           }
           }
           while(left<=right);

S.No: 16	Exp. Name: ***Implementation of Circular Queue using Dynamic Array***	**Date: 2023-06-18**

Aim:

Write a program to implement `circular queue` using **dynamic array**.

ID: 224G1A05C3

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

```
Sample Input and Output:
    Enter the maximum size of the circular queue : 3
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 2
    Circular queue is underflow.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 3
    Circular queue is empty.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 111
    Successfully inserted.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 222
    Successfully inserted.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 333
    Successfully inserted.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 444
    Circular queue is overflow.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 3
    Elements in the circular queue : 111 222 333
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 2
    Deleted element = 111
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 444
    Successfully inserted.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 3
    Elements in the circular queue : 222 333 444
